

## **Install Material List/ Mulch and Soils Conversion Chart**

**Landscape Peat Replacer:** Another great product from Vital Earth, this soil renovator is mixed in with the soil where you want to plant the tree or shrub. It adds organic matter, compost, and peat moss. If used in clay soil, it will help with drainage, and if used in sandy soil, it will help retain moisture.

**Mulch:** We recommend Vital Earth mulch, specifically shredded hardwood mulch. This will help retain moisture in the soil, suppress weeds, maintain temperature, and add organic matter over time.

**Root Activator:** We recommend a root activator by Carl Pool. This product helps prevent transplant shock and stimulates root growth.

**Soaker Hose:** This will help after installation by slowly releasing water to deeply soak the soil, aiding in root training for the tree or shrub and helping retain more moisture.

**Vitazyme:** This is an all-natural bio-stimulant by Vital Earth that adds beneficial mycorrhiza to the soil to help with root growth and nutrient intake. It unlocks phosphorus, boosts the immune system, and promotes a beneficial microbial community.

## Mulch and Soil Square Feet Coverage Based on a 2 Cubic Feet Bag of Soil or Mulch

### 2 Cubic Feet Bags of Soil or Mulch

Depth	100 sqft	1000 sqft
2"	8 bags	80 bags
3"	12 bags	120 bags
4"	15 bags	150 bags
